

## **Smaller Applications Pyroflex available in 8mm and 12.5mm Diameter tubing**

Pyroflex fitted within smaller application

This totally new concept in miniaturised automatic fire protection employs the well proven principle of firetrace linear detection which ruptures when exposed to fire.

The Pyroflex consists of a sealed thermoplastic tube filled with liquid extinguishant gas. The tube, when fitted within the equipment to be protected, will in the event of a fire soften and burst at its hottest point releasing the extinguishant gas directly into the heart of the fire. The Firetrace pressure switch can be incorporated with a Pyroflex offering isolation or alarm initiation.

**Firetrace is the efficient, reliable, affordable solution**
